TPG Mini – Compact Power, Full Control

TPG Mini is the latest addition to our TouchPayGo series — now available for integration into existing hardware or as a standalone unit with optional floor stand, roof, and LED lighting.

With TPG Mini, you can easily control multiple EV charging stations and start or stop charging sessions. Payments are made directly with contactless bank cards, offering a seamless experience for all users.

Equipped with PinOnGlass, there are no upper transaction limits, making it ideal for any service or product price point. TPG Mini is the perfect complement to app-based payments, allowing drivers from around the world to simply tap their card, charge their vehicle, and drive away — receiving a digital receipt when the session ends.

Choose from custom stand colors, and tailor the MMI interface to match your brand's color scheme and logo. Like its predecessors in the TouchPayGo family, the TPG Mini is rugged, weatherproof, and built for the Nordic climate — boasting IP65 and IK10 certification.

Connect the TPG Mini via 4G or LAN to our Connect back office, where you can easily manage and integrate existing charge points. Our modern, scalable API supports mixed hardware environments and future growth.

With over 30 years of experience, ParkChargePay is a trusted name in Nordic payment solutions — not a newcomer, but a proven partner in charging innovation.
